1. Summary

Metric	Value
Test cases in the Test Case Specification	38
Test cases passed	**38 / 38**
Automated tests executed (unit + system + performance)	247
System & performance tests passed	26 / 26
SRS requirements verified	26 fully, 2 partially, of 28
Exit criteria (Test Plan 5.3)	MET: all planned cases executed, no open critical/high defects, security & performance NFRs pass

Validation approach (Test Plan §5): system tests drive complete journeys through the HTTP API (`tests/system`), security validation runs against a live TLS 1.3 server, and performance tests load a separate server process sized to 10,000 bays and 50 lanes (`tests/perf`).

6. Defects found and fixed during testing

#	Found by	Defect	Fix
1	TC-Scale-01	p95 latency 880 ms / 81 req/s at 10k bays: VMS summary recomputed on every request; BaseHTTPMiddleware overhead; fsync per commit	Versioned summary/VMS cache, pure-ASGI middleware, WAL synchronous=NORMAL → > 500 req/s, p95 ≈ 100–120 ms
2	TC-PAY-04	`/receipts/{id}.pdf` captured by the JSON route (`{id}` matched `abc.pdf`)	PDF route declared first
3	TC-Rel-01	Soak test exits silently failed with 401 after session expiry (test defect)	Soak test uses the cashless path and asserts ≥ 100 exits
4	TC-SLOT-03	Level boards listed categories with no bays (e.g. '2W: 0' on level 3)	Boards show only categories present on the level

No open defects at sign-off.
